

TOOLBOX TALK

FALL PROTECTION: EP04

Maintaining, Servicing and Discarding Fall Protection Equipment

Ensuring equipment is safe for use is vital to ensure the users safety.

Maintenance and Services:

Not all work at heights equipment can be serviced. Products like SRL's, Winches and Rescue hubs can be serviced and maintained but must be done by an authorised service centre.

Discarding Damaged Equipment:

Any work at heights equipment that can not be serviced and re-certified must be destroyed and discarded properly to ensure that no person can accidentally use damaged equipment.

Inspections:

All work at heights equipment must be inspected:

1. Pre-use (by user – US229998).
2. Periodically; 3, 6 or 12 monthly depending on site (by a Subject Matter Expert).

Inspect your harness and fall protection equipment before each use

IMPORTANT: Reporting any incidents is vital, even if no injuries were sustained, this is to ensure that nobody re-uses compromised equipment and to prevent reoccurrence.

Need Help?

If you need a fall protection plan or annual fall protection equipment inspection done, contact Protekta Safety Gear to ensure the safety of your site.
