

# CASE STUDY

## Airbus Defence & Space: Astrium

### THE PROBLEM:

Astrium Satellite Manufacturing has to implement a multi-purpose work platform system that must meet their strict safety regulations and provide a safe environment to produce satellites. Traditional scaffolding is too heavy and cumbersome, while aluminium towers do not meet their requirements, as each application is different.

### THE SOLUTION:

LOBO Systems' safe and secure platform product. The unique and patented clamp allows the system to be assembled without the use of tools into any size or shape. This allows Astrium engineers to attach a guardrail at any point on the system. Therefore personnel are not exposed to the risk of a fall during assembly, thereby meeting the safety rules.

### THE BENEFITS:

- Attaching a guardrail from a lower level, before it is needed, ensures a safe system is built. This unique versatility of the LOBO System brings a safe working procedure to Astrium.
- The LOBO System also brings cost reduction, enhanced efficiency & performance as engineers can build their own platforms at any time, to satisfy constantly changing requirements.
- The LOBO System creates a safe working environment, which increases productivity and maximizes the return on investment.

The unique & patented LOBO clamp

### Conformities

EU: BS EN1004:2004 BS 1139 parts 3 & 4, CEE

USA: OSHA Compliant, ANSI A10.8, 29 CFR Part 1920 (General Industry)

Canada: CAN/CSA Z797-09

Australia: AS/NZS 1576.1:2010 and AS/NZS 1576.3:2015 Tower
